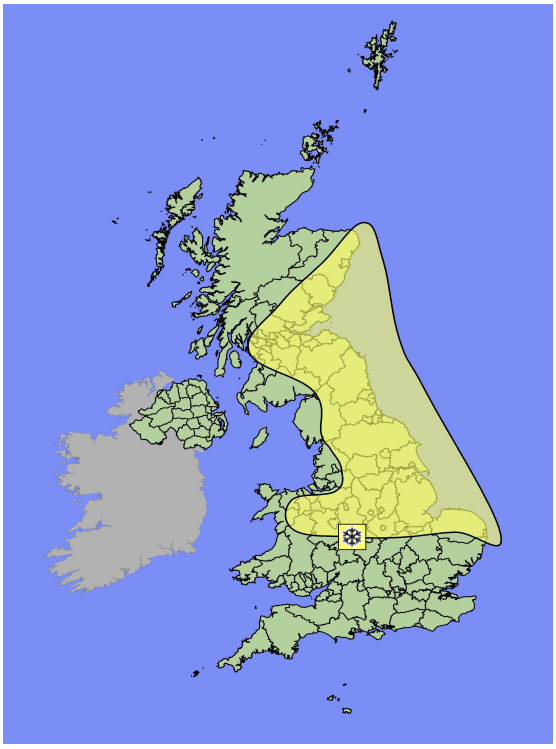
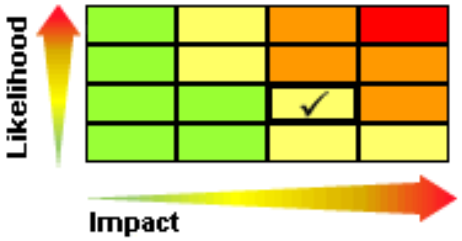
National Severe Weather Warning Service





Chief Forecasters Assessment
The frontal zone stalled over the UK on Sunday is expected to continue to affect some parts of the UK during Monday but by then is likely to be a weakening feature. Associated snowfall on Monday is thought likely to be both less extensive and not as heavy as on Sunday.Meanwhile, this frontal zone is then expected to become re-orientated such that eastern and central regions are most likely to be affected by snow, whilst over Scotland snow is likely to be more showery. An update to this alert will be issued on Saturday.

The Met Office have issued a **Yellow Alert** of **Snow**

Valid from **00:05 on Mon, 11th Feb 2013** until **18:00 on Mon, 11th Feb 2013**

Further spells of snow are expected to affect parts of the UK during Monday, particularly during the early hours and morning. There is then potential for further accumulations of 1 to 3 cm at lower levels and up to 10 cm over higher ground above 300 metres. Ice is then also increasingly likely become a hazard and the public should be aware of possible disruption to transport.
